

PRE-ENGINEERED SYSTEM DESIGN AND ENGINEERING INTO EVERY DETAIL

All products of TOSTEM are developed and designed, manufactured, and assembled under an integrated production process with strict TOSTEM quality control.

The greatest benefit of TOSTEM'S PRE-ENGINEERED SYSTEM is the ability to create consistent high-quality finished product. The quality has been embedded since start, all processes are done in-house and product quality is being controlled by CNC machines and punching dies. Anyone can assemble the product with the same level of quality with a screw driver and the final output is not dependent on the worker's skills.

WINDOW IN A BOX

- The manufacturing process is mass production oriented.
- Entire window is manufactured at factory, except glazing and assembly.
- Manufacturing accuracy is so good that there is no mismatch during installation.
- Hardware is fixed at factory; site work is very minimal.
- Entire window is packed in 2 separate boxes for sash and frame.

TOSTEM is a window manufacturer and not merely a fabricator or system supplier. The entire accountability for timely supplies and quality of product is with TOSTEM.

TOSTEM works with trained installers who would undertake glazing, assembly, and installation of windows. TOSTEM will always ensure that the project is completed within the time promised.
